

Please be very very care full, we were told that deregulating the Public utilities would reduce cost and rates, increase efficiency, and every body will live happily ever after...Now many years and billions of dollars later, things are much worse and expensive "thank you" to Enron and the likes.

Dealing with a local ISP provider like Sonic gives us someone in our community to jump on when things are not right. Deregulating large gigantic companies like SBC who don't give a twit what they charge, or who they run out of business. Because they control everything... BIG GET BIGGER.. They tend to outsource all problems to India...

Please and consider the small local business and consumer "The backbone of America" when looking at these requests from Verizon, SBC, QUEST and the like

THANK YOU
